How to manage UL Power Supply for Lumberg Active Components

Carmine D'Errico - 2019-08-22 - How-to articles

Affected Modules 0980 ESL 390-1x1

Network type Profinet

PLC Siemens

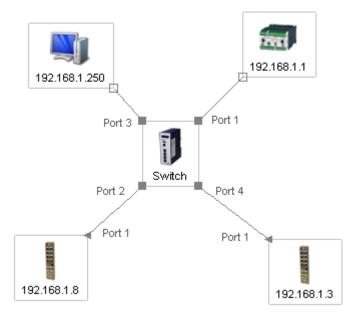

Problem Description

Current behaviour: After switching of the $U_{\scriptscriptstyle L}$ power supply from the system chain, an error in the PLC-system status is received.

Expected behaviour: After switching off the U_L power supply from the system chain, *PLC "Diagnostic" error should not be displayed on the PLC error LED*

Configuration: Network Topology

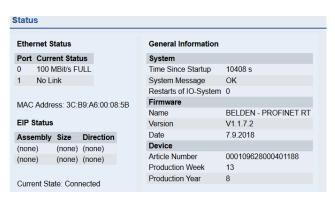

Device Description	IP Adress
Laptop	192.168.1.250
Siemens PLC	192.168.1.1
Belden Industrial Switch	192.168.1.20
0980 ESL 700	192.168.1.8
0980 ESL 390-1x1	192.168.1.3

Please find in the following section the system setup from the Lion-P web page:

System				
Connection Status		General Information		
Network		System		
Port 0	100 MBit/s FULL	Time Since Startup	10333 s	
Port 1	No Link	System Message	OK	
Phy MAC	3C:B9:A6:00:F5:3E	Restarts of IO-System	0	
Address		Firmware		
IP Address	192.168.1.3	Name	Belden - PROFINET RT	
Subnetmask	255.255.255.0	Version	V2.1.0.9-2.2 (F10017)	
Gateway	192.168.1.3	Date	23.5.2018	
Profinet		Device		
State	Connected	Name	0980 ESL 390-121	
Name of Station	digitalio1	Ordering Number	934879007	
		Hardware	V7.01	
		Serial Number	00416	
		Production Date	45 / 2018	

Lion-M device:

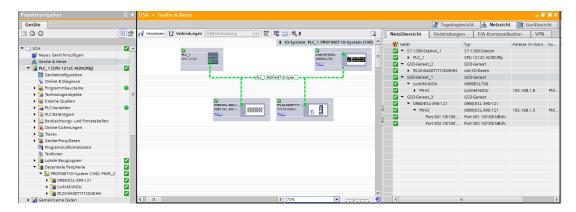

Project simulation in TIA portal

When you choose to deactivate the UL source, it will affect all actors in the downstream of the network.

Therefore it is important to divide the sources of errors into two types: the error due to the absence of the UL source and the error due to the absence of the UL source at the

peripheral points of the automation infrastructure.

Here we build up a network with all the U_L power supply. NO ERROR APPEARS.

Now we switch off the UL Power Supply for both the modules

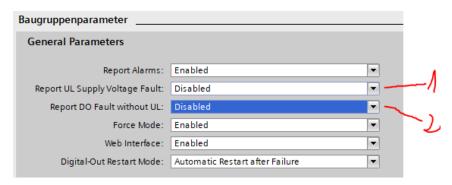

We notice that module 0980 ESL 390-1x1 shows an error. These are the reasons:

- The module provides an option to manage the error propagation for *UL upstream* power supply
- The module provides the option to manage the propagation *UL Power Supply* error for downstream components

Possible workaround description for 0980 ESL 390-1x1

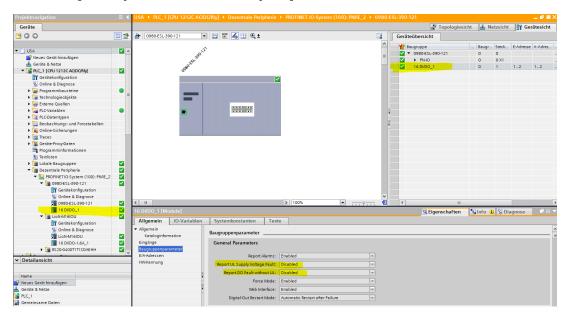

For this module, you have these two options which you can check:

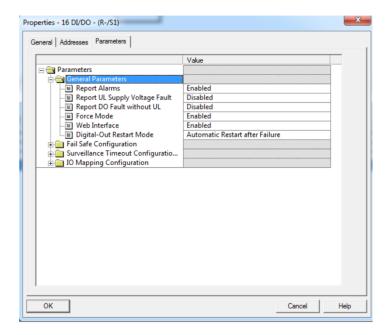

The option 1 deactivates the error propagation for UL Power Supply in upstream.

The option 2 deactivates the error propagation for UL Power Supply in the downstream $\,$

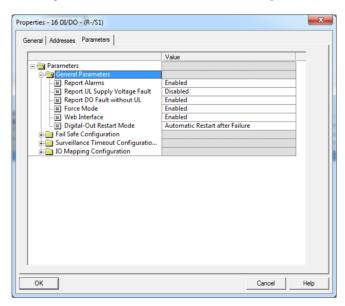

This could probably be a workaround for your problem.

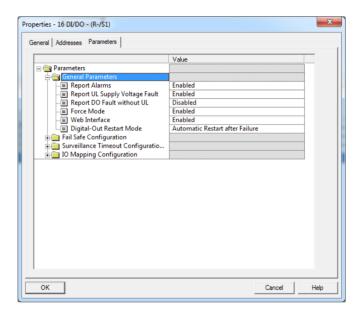

Other suggested setting configurations with relative tested behaviour

No Diagnosis without UL and activated Output

Diagnosis without UL only for activated Output

UL diagnosis when off or below $18\ensuremath{\text{V}}$
